

Cavern Chair

DENNIS ABALOS

The **Cavern** chair is a rotational moulded design inspired by caves and organic voids in nature.

The design is intended to be inviting and playful with an aesthetic of fluid movement.

The **Cavern** chair features beautiful, smooth lines that combine a sleek seating profile with an internal organic cavity.

The hollow centre of the **Cavern** chair's geometry is engineered to be as structurally efficient as possible, taking into consideration that it would be fabricated using polyethylene.

The **Cavern** chair's form is designed to be visual appealing but also as a self supporting body with structural integrity.

The modern and fresh design of the **Cavern** chair moves away from conventional "upside down bucket" looking rotational moulded furniture.

Equally perfect for homes and public use, the **Cavern** chair blends comfort, aesthetic and practical design into a highly-comfortable seating for indoor and outdoor use.

The **Cavern** chair is to be fabricated using 100% recyclable polyethylene with a five year UV block rating.

The **Cavern** chair is available in the choice of 8 rotational moulded Polyethylene colours: Yellow, Magenta, Lime Green, Light Blue, Red, Orange, White, Black.
