Winner of a Red Dot Design Award 2011

Winner of Interior Design Excellence Award in Product Design 2011

## **Design Concept**

A comfortable indoor leisure chair, Snug is inspired by the shape and aesthetic of the beanbag.

Snug is handcrafted from eco-friendly rattan which introduces warmth and natural beauty into the home.

The design fuses traditional handcraft weaving methods with contemporary furniture design.

## **Design Features:**

The inspiration behind the Snug chair was to design an organic shaped seat out of a hollow, singular form.

Designed to be a leisure chair for the home, it provides a comfortable seating solution for relaxation in any setting.

Each Snug chair is meticulously handmade by weaving artisans using skills passed down from many generations. Round core rattan is skilfully woven over a recyclable steel frame, creating an organic hollow form and unique sculptural aesthetic.

Snug is eco-friendly using self-sustaining organic materials such as rattan and abaca that are sourced from sustainable plantation farms.

Snug uses a small quantity of steel tube which can be easily recycled.

Traditional hand-crafting methods make the Snug chair easy and environmentally sustainable to produce. It does not rely on industrial mass production processes.

The Snug chair uses minimal man-made materials and the majority of the production requires handwork and minimal machinery.

Snug chair celebrates the importance of craft based skills and traditional artisans in modern furniture design.

The Snug comes in two types of Rattan: Golden Natural or Dark Grey Slimit.
